```c
#include<stdio.h>
#include<sys/types.h>
#include<unistd.h>
int main()
{
 pid_t childpid;
 printf("The main program process ID is %d\n",getpid());
 childpid=fork();
 if(childpid!=0)
 {
  printf("This is the parent process with ID %d\n",getpid());
  printf("The child process ID is %d\n",childpid);
 }
 else
 {
  printf("This is child process with ID %d\n",getpid());
 }
 return 0;
}
```
